

# Debugging & Traceability

Date	11 November 2022
Team ID	PNT2022TMID17260
Project Name	Real-Time River Water Quality Monitoring andControl System
Maximum Mark	2marks

## FORMATIVE STUDY

To understand the current limitations of automatic hint delivery and opportunities to improve it, we observed the hint giving practices of teachers in a local introductory CS course as they helped students debug incorrect code for programming assignments.

We analyzed 132 Q&A posts from the CS course's online discussion forum where instructors answered students' debugging questions. Additionally, we conducted a semi-structured interview with a teaching assistant from the same course to gain insight into the patterns of hint-giving that we observed in the online discussions. This analysis yielded three design guidelines that motivated the design of Trace

INTERFACE DESIGN:

The system executes the incorrect and fixed programs, and stores a snapshot of both their internal states at every execution point. Using this information, the system interface, shown in Figure 2, renders execution traces of both the incorrect (D) and fixed (E) programs side-by-side. To help the student find the behavioral differences, the interface highlights where the incorrect program diverges from the fixed one

The screenshot shows the 'CALL STACK' window in Visual Studio. The top section, 'CALL STACK', is expanded, showing a series of 'dotnet' frames, all in a 'PAUSED ON EXCEPTION' state. Below this, the 'BREAKPOINTS' section is also expanded, listing several breakpoints set on files like 'EquityVolatilityScenarioTests.cs' and 'equityvolsurface.cpp'. The status bar at the bottom indicates the application is 'Running'.

Call Stack Item	Status
> .NET Core Attach	RUNNING
> (gdb) Attach	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION
> dotnet	PAUSED ON EXCEPTION

## EVALUATION

To see if Trace Diff can help students debug their code efficiently, we conducted a controlled experiment and evaluated our interface alongside the Online Python Tutor interface.

We recruited 17 students (male: 15, female: 2; undergraduate: 13, graduate: 4) from a local university to participate in this study. All participants major in computer science and have experience in the Python programming language. In preparation for this study, we collected a dataset of incorrect student submissions to programming problems assigned in CS1, an introductory computer science course at our university.
